PROFILE

Senior technology executive and hands-on technologist with nearly 20 years of experience building enterprise platforms, driving AI innovation, and leading technology transformation across government and industry. Former DHS Chief Technology Officer and Chief AI Officer with experience overseeing a $10B federal IT portfolio and delivering AI capabilities at enterprise scale. Combines deep engineering expertise with strategic growth, business development, and executive leadership to translate emerging technologies into measurable mission and business outcomes.

PROFESSIONAL EXPERIENCE

2025 - Present, **SVP, Solution Engineering at Amivero** McLean, VA

Led technology innovation, solution engineering, and AI transformation initiatives, combining hands-on technical leadership with business development, organizational growth, and strategic planning.

- Architected and developed secure enterprise AI infrastructure, generative AI chatbots, and reusable data and AI platforms supporting internal operations and federal customer missions.
- Developed tailored innovation plans across the company's federal project portfolio, partnering with delivery leadership to identify mission-driven opportunities and implement AI and automation technologies across approximately 50% of active projects.
- Led company-wide AI literacy, upskilling, and reskilling initiatives, engaging over 40% of the workforce and empowering employees to independently develop AI-driven solutions that improved productivity and operational efficiency.
- Architected and developed a proprietary AI-powered growth intelligence platform that automated opportunity discovery, evaluation, and proposal workflows, increasing the business development pipeline by 150% while reducing proposal development time by 60%.
- Led technical growth and capture efforts that converted greenfield Data and AI opportunities into contract wins, shaping solutions through strategic customer engagements, technical challenges, proposal development, and oral presentations.
- Supported Amivero's successful acquisition by Xpect Solutions, a NewSpring Holdings platform company, through executive management briefings and technology due diligence, while executing an AI strategy that strengthened the company's capabilities and market differentiation.

2021 - 2025, **Chief Technology and AI Officer at DHS** Washington, DC

Provided technical oversight and organizational leadership, including the management of artificial intelligence initiatives, for a $10B IT portfolio spanning 22 components and offices within the Department of Homeland Security. Managed a $15M budget and over 100 federal employees.

- Established the DHS Office of the Chief AI Officer, leading a nationwide recruitment initiative that hired 50 AI experts from industry, academia, and government.

- Led the development and enterprise deployment of a generative AI chatbot serving 20,000 DHS personnel, advancing the adoption of AI technologies across the department.
- Developed and implemented department-wide AI governance policies, standards, and workforce training programs to enable the safe and responsible adoption of emerging technologies, including generative AI and facial recognition.
- Negotiated and awarded a department-wide Login.gov enterprise agreement, generating over $2.5M in cost avoidance and establishing a unified authentication capability for external-facing services.
- Directed the development and delivery of enterprise technology platforms, including secure DevSecOps toolchains, generative AI applications, and information-sharing solutions supporting department-wide modernization.

2019 - 2021, **Lead Solution Engineer at Salesforce** Reston, VA

As a lead Solution Engineer in one of the fastest-growing business units (Global Public Sector) at Salesforce, I provided strategic and tactical account support ranging from small civilian agencies to entire departments blending my federal experience with adaptable technical skills.

- Provided technical leadership on 52 different opportunities since 2019, totaling over $10 million in revenue.
- Followed human-centered design and DevSecOps create tailored demonstrations and shareable assets for enterprise use.
- Led internal Q&A sessions to help the federal sales organizations understand federal laws, policies, standards, and best practices.
- Worked with government Solution Integrators (SI's) and other partners to ensure solutions lead to customer success.

2016 - 2019, **Chief Technology Officer (CTO) at DHS/ICE** Washington, DC

As the ICE CTO, I managed all enterprise technology functions (Enterprise Architecture, Data Architecture, Vendor Management), as well as defined and led the technology culture change of a 400-person organization and half a billion dollars in IT Spending.

- Implemented enterprise-wide multi-cloud General Support System (GSS) leveraging Amazon Web Services and Microsoft Azure.
- Managed the migration of 87 production systems and 133 total environments to cloud in six months providing up-to 75% cost savings on compute costs.
- Developed strategy and lead IPT to implement enterprise Application Platform as a Service capability (APaaS) to enable no-code/low-code Rapid Application Development (RAD).
- Implemented enterprise Agile coaching and DevSecOps tools strategy that reduced lead and delivery time on provisioning new resources by 99%, doubled deployment frequency, and doubled Agile team maturity.
- Designed and implemented enterprise DevSecOps toolchain to enable every OCIO development team with distributed CI/CD, Test Automation, and Cloud Orchestration capabilities.
- Worked with individual systems teams to plan cloud migration, migrate to Open Source technologies, and adopt a DevOps "toolchain".

2016, **Cloud Strategist at USDA** Washington, DC

As the Cloud Strategist in the OCIO Cloud Strategy and Policy division, I was responsible for planning and executing the department-wide strategy for adopting secure commercial cloud solutions.

- Built coalitions with department level engineering, networking, and security leadership to develop a common-sense approach to incrementally adopting commercial cloud solutions.
- Engaged USDA enterprise shared service providers to evaluate and certify commercial cloud ready shared services that can be leveraged by all USDA customer Agencies.
- Lead working groups and integrated project teams to develop enterprise cloud policy and guidance that identified areas of trust and flexibility for USDA customer Agencies to drastically reduce the acquisition and securing of commercial cloud solutions while still ensuring security and compliance.
- Worked directly with USDA Customer Agencies to identify common commercial cloud service needs and provide necessary expertise.

Previous Positions Washington, DC

- 2011 - 2016: Analytics Branch Chief at General Services Administration
- 2009 - 2011: IT Program Analyst at Department of Homeland Security
- 2008 - 2009: Software Engineer at Aspex, Inc.
